# Mandatory Features

- List all of the series contained in the API used by the paging scheme provided by the API.

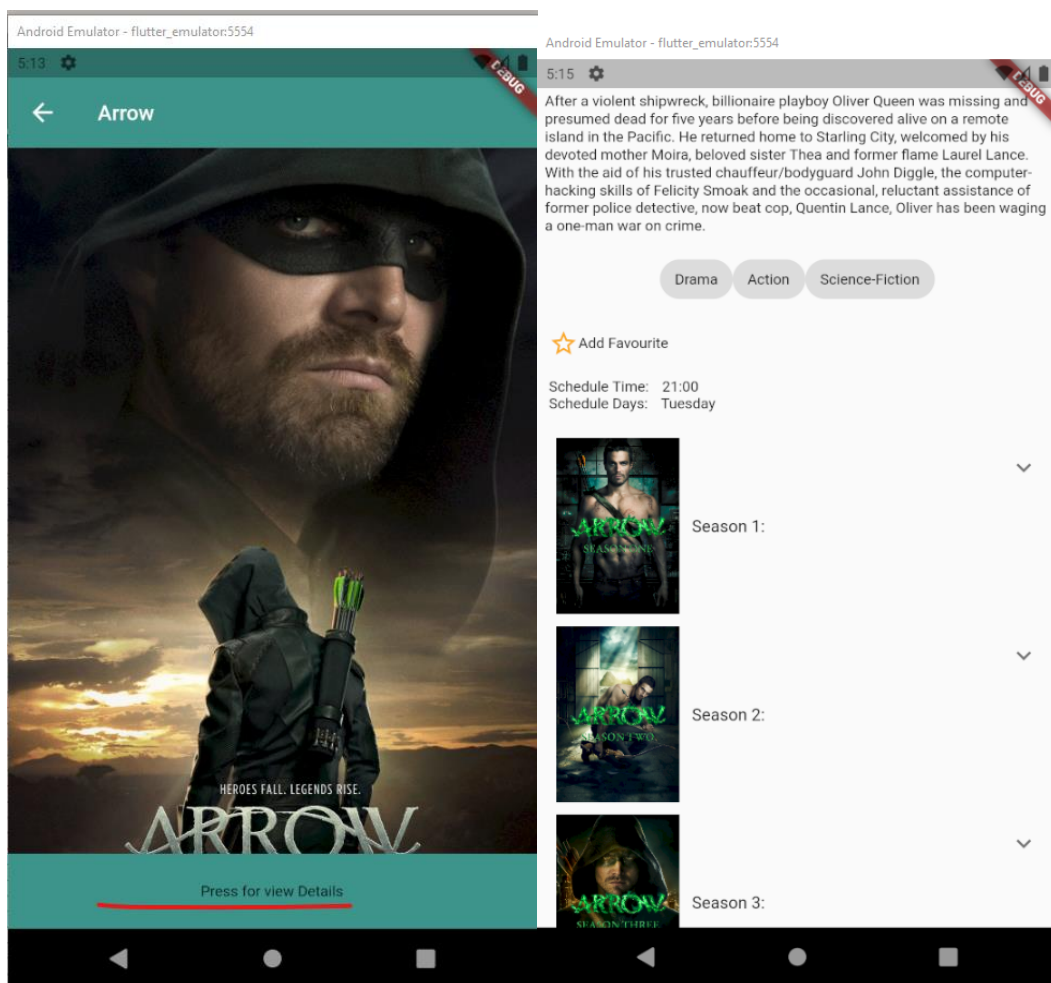

- Allow users to search series by name.
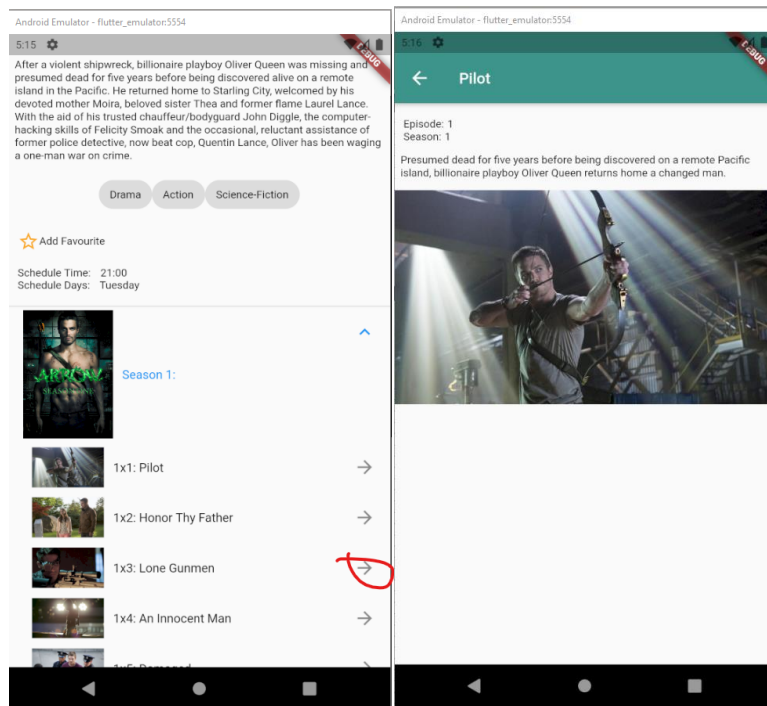

- The listing and search views must show at least the name and poster image of the series.

*Press the card*

- After clicking on a series, the application should show the details of the series, showing
the following information:
  - Name
  - Poster
  - Days and time during which the series airs
  - Genres
  - Summary
  - List of episodes separated by season

- After clicking on an episode, the application should show the episode's information, including:
  - Name
  - Number
  - Season
  - Summary
  - Image, if there is one

## Bonus:

- Allow the user to set a PIN number to secure the application and prevent unauthorized users.

**Deliverables**

When you finish the assignment, generate the application apk, and place it into a distribution folder. Then, share the repository link with your initial contact via email. Indicate which, if any, of the bonus tasks you completed.

If you didn't manage to finish everything, please tell us which parts you completed.

Save

- For supported phones, the user must be able to choose if they want to enable fingerprint authentication to avoid typing the PIN number while opening the app.
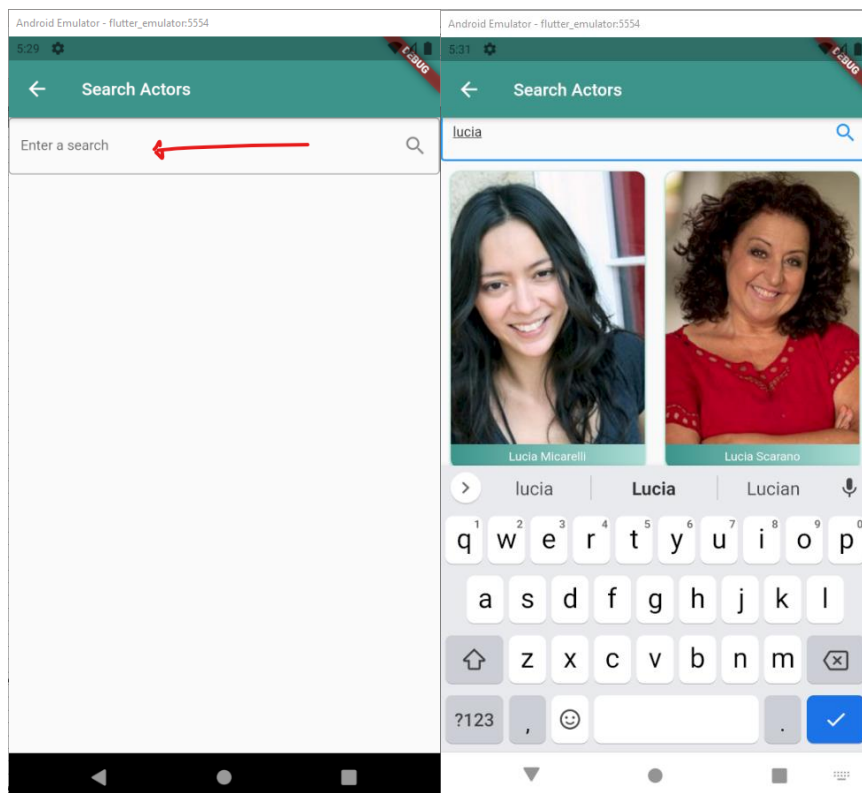

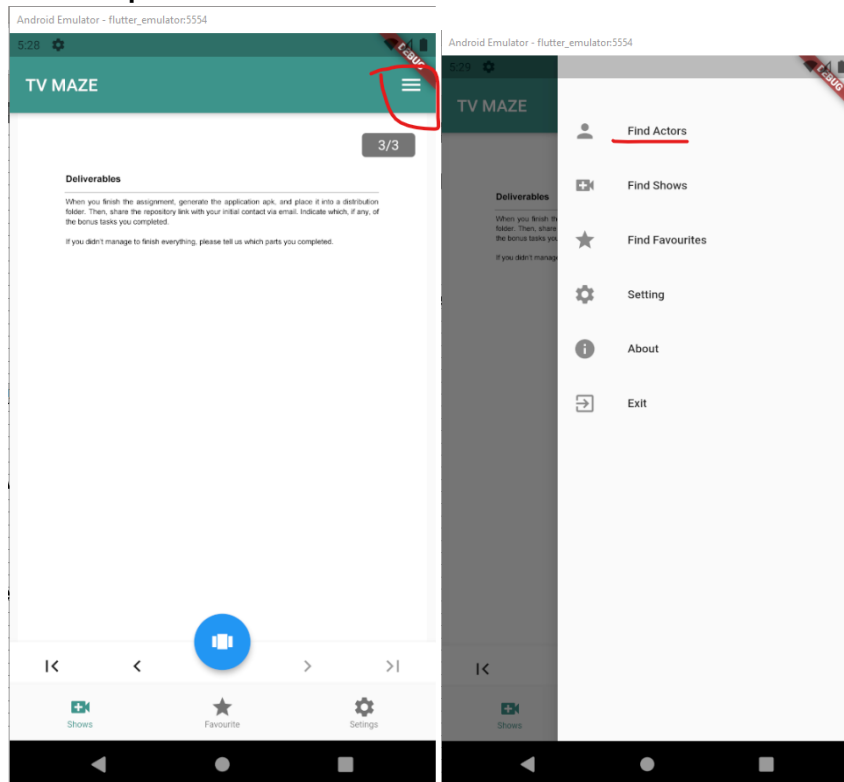

- Allow the user to save a series as a favorite.

- Allow the user to delete a series from the favorites list. ***Press the star in card***

- Allow the user to browse their favorite series in alphabetical order, and click on one to see its details.
- Create a people search by listing the name and image of the person.

- After clicking on a person, the application should show the details of that person, such as:

- o Name
- o Image
- o Series they have participated in, with a link to the
  series details.
